## Profile

Results-driven Software Engineer with 1+ years of professional experience specializing in Java, Spring Boot, and React.js. Adept at building scalable backend systems, optimizing frontend performance, and deploying robust cloud-native solutions. Passionate about clean architecture, microservices, and leveraging modern frameworks to deliver secure, high-performance applications.

## Experience

### Cognizant | Hinjewadi Phase 3

Aug. 2025 to Present

Jr. Software Engineer

- **Backend Development:** Developed and maintained client-side applications for a major insurance project utilizing Java and Spring Boot, identifying and resolving 15+ critical defects to ensure high software reliability.
- **Frontend Optimization:** Engineered responsive frontend features using **React.js** and implemented optimized data-fetching mechanisms, successfully reducing application load time by 20%.
- **Architecture & Code Quality:** Actively participated in peer code reviews and application architecture discussions, promoting best practices for system scalability, security, and long-term maintainability.
- **Technical Documentation:** Authored and maintained comprehensive technical documentation to clarify system design, streamline future development, and support team collaboration.
- **Cloud Deployment:** Streamlined deployment pipelines and ensured timely, reliable software delivery by leveraging **Azure Cloud** infrastructure.

## Projects

### CredifyU — Digital Identity Platform

GitHub / Live Link

- **Problem:** Academic credential verification suffered from high latency, reliance on active server connections, and vulnerability to tampering or data breaches.
- **Solution:** Engineered an offline-first PWA/TWA digital identity platform using Service Workers and QR-based digital signatures, enabling seamless validation without network connectivity while implementing JWT session management and OTP verification to secure student records.
- **Result:** Achieved sub-2-second load times through lazy loading, asset caching, and custom UI loaders, delivering a fluid user experience.

### RealEstate CRM

GitHub / Live Link

- **Problem:** Fragmented property and client data made it difficult for real estate agents to track properties, manage leads, and coordinate team actions efficiently.
- **Solution:** Architected a scalable property management system using Spring Boot, Spring MVC, and Thymeleaf, integrating rigorous edge-case validation and secure authentication flows to ensure high system reliability.
- **Result:** Streamlined internal workflows into a centralized, high-performance tracking hub using modern backend design patterns.

## Skills and Abilities

- **Coding Languages:** Java, JavaScript, HTML, CSS, SQL, TypeScript
- **Frameworks/Libraries:** Spring, Spring Boot, Spring Ai, Node.js, Angular, React.js, Express.js, Next.js, Tailwind, Bootstrap, Redux.js
- **Tools:** MongoDB, PostgreSQL, MySQL, Postman, Git, GitHub, Redis, Docker, Antigravity, Claude, ChatGPT, Gemini, Azure DevOps, AWS Services
- **Certifications:** AWS Certified Cloud Practitioner, Claude Certified Architect Foundation
- **Other:** REST, MVC, OOP, UI/UX, Data Structure, Algorithm, MCP, RAG, Communication, Teamwork, Problem Solving

## Honors & Awards

- **Top 50 Finalist / Qualifier**, Cognizant AI Builder Program (2026) — Selected among top participants for building innovative AI-driven applications using modern tech stacks.

## Education

- SKN Sinhgad College of Engineering, Pandharpur — Aug. 2021 to June 2025
  B. TECH In Computer Science & Engineering: GPA – 9.43/10
